

Notes Sharing Platform

Full Project Documentation

Introduction The Notes Sharing Platform is a simple front-end web application designed for creating, managing, and sharing notes. It is built using plain HTML, CSS, and JavaScript so that beginners can understand how browser-based applications work without needing a complex setup or framework.

Project Overview

The application allows users to create notes, choose visibility, add tags, search notes, delete notes, share public notes using a generated share code, and switch between light and dark themes.

Features

1. Create and save notes 2. Mark notes as public or private 3. Generate share codes for public notes 4. Search by keyword or tag 5. Delete note cards 6. View public notes from other users 7. Persistent storage using localStorage 8. Dark mode option

Code

HTML Structure

```
<form id="noteForm">
  <input id="noteTitle" type="text" placeholder="Note title" required />
  <textarea id="noteContent" placeholder="Write your note here..." required></textarea>

  <select id="noteVisibility">
    <option value="private">Private</option>
    <option value="public">Public</option>
  </select>

  <input id="noteTags" type="text" placeholder="study, notes, react" />
  <button type="submit">Save Note</button>
</form>
```

JavaScript Logic

```
function getNotes() {
  const stored = localStorage.getItem(STORAGE_KEY);
  if (!stored) {
    localStorage.setItem(STORAGE_KEY, JSON.stringify(defaultNotes));
    return [...defaultNotes];
  }

  try {
    const parsed = JSON.parse(stored);
    return Array.isArray(parsed) && parsed.length ? parsed : [...defaultNotes];
  } catch {
    localStorage.setItem(STORAGE_KEY, JSON.stringify(defaultNotes));
  }
}
```

```

        return [...defaultNotes];
    }
}

noteForm.addEventListener('submit', (event) => {
    event.preventDefault();
    const title = noteTitleInput.value.trim();
    const content = noteContentInput.value.trim();

    if (!title || !content) {
        alert('Title and content are required.');
```

return;

```
    }

    const notes = getNotes();
    notes.unshift({
        id: crypto.randomUUID(),
        title,
        content,
        visibility: noteVisibilityInput.value,
        tags: noteTagsInput.value.split(',').map(tag => tag.trim()).filter(Boolean),
        createdAt: new Date().toISOString(),
        author: 'You'
    });

    saveNotes(notes);
    renderNotes();
});
```

CSS Styling

```

body {
    margin: 0;
    font-family: Arial, Helvetica, sans-serif;
    background: var(--bg);
    color: var(--text);
}

.panel {
    background: var(--panel);
    border: 1px solid var(--border);
    border-radius: 20px;
    box-shadow: var(--shadow);
    padding: 22px;
}
```

Output Sample

Notes Sharing Platform

Create Note

[Title field]

[Content area]

Visibility: [Private / Public]

Tags: [study, javascript]

[Save Note]

My Notes

- Study Plan
- Project Ideas

Public Notes

- Study Plan

Shared Note

Enter Share Code: STUDY2024

[Open]

Explanation

This app uses browser local storage to persist data without a backend. When a user creates a note, the system validates the input and saves it in `localStorage`. The page then re-renders the note list so the new note appears immediately. The search box filters notes based on title, content, or tags. Public notes receive a generated share code that can be used to open a specific note in the shared panel. The delete action removes the note from storage and updates the display immediately. The CSS creates a responsive card layout and theme colors, while JavaScript handles the dynamic interaction.

How to Run the Project

1. Open the project folder 2. Run: `python3 -m http.server 8000` 3. Open: `http://localhost:8000`

Conclusion

The Notes Sharing Platform is a beginner-friendly web project that demonstrates how to build a working, interactive application using only HTML, CSS, and JavaScript. It includes core features such as note creation, data persistence, sharing, and searching, which makes it a strong example of practical front-end development.
